Yes, I know this question has not been posted, but it is a very good one and I feel it will be useful for many people. It mostly relates to my work, and I wanted to share with people who are looking for what the difference is between this and the other. Well, first of all, in these two examples, they both have a one-to-many relationship. That means that data from one or more columns can have a relationship to another column or multiple columns and so on.
