One of the most popular email servers, Microsoft Exchange Server is at the core of the modern business and is made available in a number of different platforms. Although this article is addressed to Windows Server, the same features can be found in Windows Server, Windows Client, Linux, Apple OS X, IBM x.e platform, and Android. Download the latest version of Microsoft Exchange Server from Microsoft's web site. The available Microsoft Exchange Server bundles include the server and administrative tools, while other versions might require an additional fee. System requirements are normally enforced for Windows Server 32 bit (Windows Server 2008 R2 is not the first version to come with Exchange (as the history of Microsoft Exchange goes back to the version released in the 1990s), but it is certainly one of the most popular, due to the features it delivers. If you are considering moving your company to the cloud, there is little reason to consider changing Microsoft Exchange Server to Microsoft Exchange Online or Microsoft Exchange Server 2019. Microsoft Exchange Server version numbers The first two versions of the Microsoft Exchange Server were numbered "Exchange 5.x" and "Exchange Server 2000". This was the point where version 5 or "Exchange Server 5" was built in the first place. The latest version available is "Exchange Server 2016", making "Exchange Server 2016" a very important milestone in its history. When it comes to Exchange Server versions, Microsoft has declared a major one in 2003, although it's not completely impossible to find an out-of-date system using Exchange 2003, but it might not be the one you are looking for. The first version where Microsoft Exchange Server was named "Exchange" (with no version number) was Exchange 2007. If you want to check the version of Exchange 2007 you are using, try opening the file system and printing the contents of the registry key: "HKCU\Software\Microsoft\Ex

- Is based on a long-established technology which ensures continuous service uptime of emails. - Its reliability, stability, and low cost of maintenance have made it the default email solution worldwide. - The Exchange Server enables seamless communication, file sharing, and calendar integration, and includes data loss prevention (DLP). - Allows exchange users to define email and calendar policy based on business compliance requirements. - Analyzes the content of incoming and outgoing emails to prevent cross-corporate email deliveries. - Enables secure email transmissions by scanning the email content for viruses, phishing attacks or spam, and by enabling encryption. - E-mail server integration - Sends Email messages through Exchange SMTP (Simple Mail Transfer Protocol), Exchange SMTP relay and MAPI (Microsoft Outlook). - Maintains a local database that stores and maintains records for users. - Maintains logs and tracking of mail communication. - Has a built-in email client. - Has various APIs (Application Programming Interfaces) for programming. Stripe is a transaction processing company, which is known for providing payments technologies. PayPal has acquired the startup to integrate the services into their platform. Stripe has over four million active businesses and 1.4 million merchants. It provides developers with APIs and SDKs for mobile, desktop, and browser-based applications. The flexibility of Stripe makes it feasible to integrate a wide range of services and products with different payment methods. As we all know, in the modern world, a traditional cash transaction system may not be suitable in a lot of cases, and a more convenient and fast way to make a payment might be the reason for it. The market for online services is expanding, and the number of customers and potential business owners is increasing. This has led to a rise in payment methods, more than ever before. PayPal has partnered with Stripe to provide a simple user experience for customers and merchants using Stripe's REST APIs and SDKs for every stripe user. PayPal will also use the software as a new transaction processing platform and aims to increase user experience and reduce friction for merchants. This cooperation is definitely a benefit for both the companies. PayPal has already made such an investment in its payments platform in the past. PayPal's move into third-party payments infrastructure is an interesting one, as competition for this market is growing, and Stripe is already working with such companies as Amazon Payments, Braintree, Dwolla, Pay
