Many forms, but they all have one thing in common: a rigorous, logical system to draw and analyze circuits. A circuit diagram helps you: - create diagrams efficiently - understand how to make circuits work - learn how different elements combine to make circuits - show how conditions cause different circuits to operate First, a circuit is anything that passes an electrical current. It could be a high-voltage wire, or a circuit of light-bulbs, for example. It could be a simple resistor, an electrical motor or a complicated circuit made out of hundreds of these elements. In this course, you will learn the essential tools for drawing all kinds of circuits. From simple to more complex, there are design objects for your circuits. Design objects can be low-voltage objects such as a circuit of LEDs, or high-voltage objects such as wires. In this class, you will design circuits that use low-voltage circuits, high-voltage circuits, resistors and transistors, switches and relays, timers and relays, ohmic elements, electromagnets and rectifiers, inductors, transformers, resistors, capacitors, and diodes. You will learn how to make your circuit work. You will learn how to design circuits to send signals through wires, and how to make these signals switch on or off, making them work together to make a circuit that is useful. You will learn how to design circuits to use the electricity that runs through your wires. You will learn how electricity is made. You will learn that you can design circuits as a starting point for making motors, pumps, or other types of electromechanical devices. Last, but not least, you will learn how circuits are easy to design, how easy it is to build and test circuits, and how this approach to electronics design helps you to do great things. You will see how easy it is to use FluidSIM to design circuits. You will see how this approach to electronics design is different from any other approach. It puts design in the hands of the engineers. To make things easier, you will have access to expert support from different FluidSIM, Festo, and industry specialists. First, you will learn how to make circuits work. You will learn how to
