Current views on indications, methods and techniques for administering oxygen]. A literature review of the current uses of supplemental oxygen in neonates and children, along with a summary of the early stages of the history of the use of oxygen in humans, is discussed. Current uses are organized according to the indications for oxygen administration: primary and secondary prevention of respiratory distress syndrome in premature infants, oxygen therapy in patients with respiratory diseases, hypoxic ischemic encephalopathy in infants, and treatment of cyanosis. It is concluded that oxygen therapy is a quick and useful intervention and, in most cases, an effective use of medical resources. However, in some settings, and in some populations,
