Please have a look at the attached screenshot and help me figure out the problem A: The problem with NPM NMI is that it doesn't do any live checks so if a VM gets a stuck check does not trigger. If you look at most NPM manuals, they say that you can set the IP/netmask and the UDP range to trigger the check. But as I mentioned this does not do any real live check, it just notifies you that there are some issues. You should call your ISP and check on their syslogs to check if they have observed anything related to this issue. And since the problem is a stuck IP address, I would suggest you to contact your ISP to increase the check time.) cells and (**D**) (GFP-U2OS) cells. Bars = 20 µm. Cells transfected with control shRNA were used as negative controls. (**E**) Comparison of the percentage of cells with GFP-U2OS dots in the cytoplasm, nucleus or both subcellular compartments. The percentage was calculated as follows: number of cells with GFP-U2OS dots/number of total cells. The experiment was performed three times. The results are shown as mean ± SD. Significance was calculated compared to control shRNA.
