Film - Wikipedia A computerized image processing method used to remove unwanted objects from digital images for display or data storage. Each object within an image can be given a unique

---

identification code, such as a "proba. Computing and Telecommunications: Data Communication and Data Communication. Definitions[edit]. In image processing, a background subtraction technique that finds the background region and subtracts that region from the image. It is used to remove moving objects (e.g., in videos or surveillance footage). The procedure starts by finding the image regions that have the least amount of movement. "For the purpose of this article, please refer to subtraction image background". Images where objects move from frame to frame (e.g., a car on the highway) are referred to as videos or motion-picture images. For a still image, the definition is more complicated. Gray-scale imaging Image-based Data Communication The transmission of information, using electrical or optical systems, for the purpose of processing, storing, or coordinating control. Consider for instance, the transmission of sensor data gathered by a remote sensing satellite or transmitted between space probes. Data-communication systems in information theory. Data-communication [Photographic equipment, Film scanning and processing - Wikipedia Sent between a terminal and a data-communication device that transmits data between the device and the connected equipment. Such as a telephone, modem or computer mouse. Data-communication - Wikipedia Data

---

Communication Definition. Computing and Telecommunications: Data Communication and Data Communication. Definition, outline, growth of technical developments, market, applications, research, business models, major players and data-communication. About This Video Summary. The process of sending information over a channel, for example telephone or television. An information channel is a route that information travels along to reach its destination. Data Communication Definition. There are two types of information channels: Physical channels and logical channels. Physical channels are used to transmit information between computers and other devices. Examples of physical channels are telephone lines and electrical wiring. The channels used for data transfers may depend on the application and include wires, wireless networks, fiber optic networks, and circuit-switched and packet-switched networks. Logical channels are specialized forms of physical channels that use defined protocols to transfer information. Examples of logical channels are the Internet, email,
