Ujjleni nemrÅ@g megjelent Multi Theft Auto: San Andreas - Deathmatch 3.Q: How to show that in an uncountable set of real numbers, for all x,y , there exists z such that $z^2=x+y$ Show that in an uncountable set of real numbers, for all x,y , there exists z such that $z^2=x+y$. I'm struggling with this problem. I'm not sure of my approach in solving this problem. For each x,y , I would take a real number z , and I would be able to show that: $z^2 > x+y$ and $z^2 < x+y$. However, this is the part of the proof that I am unsure of. How can I show the two inequalities? How do I know that I should not use ϵ and δ ? I feel like this should have an answer somewhere, but I can't seem to find it. A: You seem to be getting close. Here's the proof of the two inequalities: For z^2 to be positive, we need $z > 0$; and if $z > 0$, then $z^2 > x+y$ and $z^2 < x+y$. If $z < 0$, then $z^2 > x+y$ and $z^2 < x+y$.
