potential role for An-Plp2, an anti-P-lineage protein, in human  
rheumatoid arthritis. Chromosome 6p22.1-p21.1 contains an anti-P-  
lineage protein (A-Plp), which is expressed in anti-P-lineage cells  
and regulated by P-lineage cell-derived cytokines. Our previous  
study revealed that A-Plp plays a crucial role in rheumatoid  
arthritis (RA). Here, we constructed, subcloned, and analyzed  
overexpression cDNAs of A-Plp2, an anti-P-lineage protein  
expressed in RA fibroblast-like synoviocytes (FLS). A-Plp2 was  
specifically expressed in synovial tissues from patients with RA and  
a mouse arthritis model, and this expression was decreased with  
osteoclastogenesis. All of the mouse A-Plp2 transcripts were  
expressed in the P-lineage-derived cells, such as macrophages,  
dendritic cells, and osteoclasts, whereas in humans only a small  
fraction was detected in macrophages,

© .Molecular controls of plant responses to bacterial pathogens.

The plant microbiome plays a central role in the health and productivity of agricultural crops. Bacterial pathogens have the capability to affect plant metabolism, development, growth, yield, and other important properties of plants. These effects are not only due to the infection itself, but are also the result of the so-called 'phytohormone-like' compounds produced by bacteria. This review will describe current knowledge of the mechanisms by which plant responses are affected by bacteria, and will focus on the role that root-associated bacteria play in plant growth and development. It will also consider the effect on plant responses to abiotic and biotic stresses.
