## WiFi Hacking For Beginners | James Wells

[Download](#)

so now that we know all that, let me list out the necessary equipment you need to make this process easier. wireless network device for this tutorial, we will use a d-link dwa-160. wireless network monitor (optional) i prefer the norton wireless network diagnostic for windows 7. since its not really necessary for the methods that im going to be teaching, then any wi-fi monitor will do. the one you find on the internet is going to cost you more in the end. a computer we will use our windows 7 computer to perform the hacking. so we wont need a mac just yet. some hackers even use the term hacking to refer to illegal actions. in reality, all hacking can be broken down into two categories: hacking and cracking. hacking refers to anything related to information security, the law, technology, or any other field. crackling refers to illegal breaking into or taking control of any computer system, whether that be a government system or not. while cracking has been used mainly for the purpose of social engineering, we are only going to be discussing wi-fi hacking here. this term primarily refers to the fact that a hacker can use access points or other devices to gain access to networks, then take over the networks. an advanced penetration testing course is pretty good at explaining it. here we have just a few ssids in the scan list. let us now copy paste the ssid and status code in the format which is defined in the scanlist file as ssid status code. so now all we need to do is login to the ap through the wifi-stumbler app. enter the ssid and the status code in the connect to window. once you enter the credentials, it will prompt for the password. and now you are connected to the access point.
