Lightroom is all about saving time. And with this update, we've made it even more time-saving than before. Now you can do things faster by using automatic, intelligent tagging and organization, and export and print faster and with better organization. And Quick Fix tools, keyboard shortcuts and consistent interface are all part of having a simple and intuitive editing experience. Improved Library organization, smart search and more will help you find the right images quickly. And with native Fast Raw Processing, removing the need to import images to Photoshop, and faster previews, you can see and edit your images faster. Adobe has also added the ability to add, communicate and update file information with friends who might want to join your Photoshop library as collaborators or reviewers. You can share entire folders of revisions and comments about any image you upload, or send a link to photos and comments from online services like Pixsy. If you want to work on as many images at once as you can comfortably manage, Adobe has upgraded Photoshop, for the first time, to include a view that shows a single image with a tiny thumbnail in the upper-right corner of your display. Click the preview thumbnail, and you see a larger version of the photo in its own window. You still can't scroll and it cannot be zoomed, but you can select most of the tools for the image. You can even adjust the view using the View menu. Libraries are used in all the same ways as they did in the previous version. You can drag images into it, organize them to make the sequence easily accessible, and create a "rollback" branch for them. You can add other items like Patterns, Gradients, Layers, Actions, Adjustment Layers, Gradient Maps, the Process panel, and items from Internet services, like the ones for Flow or Pixsy. You can even see an online reference of backgrounds and patterns without having to leave Photoshop.
